

# Turtle reference

The following is a summary of turtle instructions, taken from the [Python reference docs](#).

## Import

```
from turtle import *
```

The turtle will begin in the screen center, facing right. Positive angles rotate counter-clockwise

Command	Example	Description
<code>home()</code>	<code>home()</code>	return to the starting point and heading
<code>right( angle-in-degrees )</code>	<code>right(45)</code>	Rotate clockwise the given number of degrees
<code>left( angle-in-degrees )</code>	<code>left(45)</code>	Rotate counter-clockwise the given number of degrees
<code>goto( x-coord, y-coord )</code>	<code>goto(-50, 50)</code>	Jump to new x,y coordinates on screen
<code>setx( x-coord )</code>	<code>setx(100)</code>	Jump only the x coordinate to new position
<code>sety( x-coord )</code>	<code>sety(100)</code>	Jump only the y coordinate to new position
<code>setheading( new-angle-in-degrees )</code>	<code>setheading(90)</code>	Point in new direction where 0 == facing right. Positive numbers turn counter-clockwise
<code>forward( distance )</code>	<code>forward(100)</code>	Move forward given distance of pixels
<code>backward( distance )</code>	<code>backward(100)</code>	Move backward given distance of pixels
<code>circle( radius )</code>	<code>circle(50)</code>	Draw a circle with radius 50 pixels
<code>circle( radius, arc-size-in-degrees )</code>	<code>circle(50, 180)</code>	Draw part of a circle, determined by number of degrees given
<code>dot( radius )</code>	<code>dot(50)</code>	Draw a filled circle(dot) of given size
<code>hideturtle()</code>	<code>hideturtle()</code>	Will still draw but hide the little animated turtle shape. Will speed up complex drawings
<code>showturtle()</code>	<code>showturtle()</code>	Show the turtle when drawing

## Pen control

Command	Example	Description
<code>pendown()</code>	<code>pendown()</code>	Draw including whenever moving, jumping location
<code>penup()</code>	<code>penup()</code>	Stop drawing when moving
<code>pensize( width )</code>	<code>pensize(1)</code>	Thickness to draw lines
<code>isdown()</code>	<code>isdown()</code>	Returns True or False based on if the pen is down

## Get turtle information

Command	Example	Description
<code>position()</code>	<code>x, y = position()</code>	Returns an (x,y) tuple of the current location
<code>xcor()</code>	<code>x = xcor()</code>	Get the current x-coordinate location
<code>ycor()</code>	<code>y = ycor()</code>	Get the current y-coordinate location
<code>heading()</code>	<code>direction = heading()</code>	Get the current facing direction in degrees

## Colors

Command	Example	Description
<code>pencolor( color )</code>	<code>pencolor( "yellow" )</code>	Change the pen color
<code>fillcolor( color )</code>	<code>fillcolor( "lime" )</code>	Change the fill color - see <code>begin_fill()</code> and <code>end_fill()</code> !
<code>begin_fill()</code>	<code>begin_fill()</code>	Tells Python you are starting a shape you want to be filled in when complete
<code>end_fill()</code>	<code>end_fill()</code>	Tells Python you have finished the shape and to fill it in
<code>bgcolor( color )</code>	<code>bgcolor( "sky blue" )</code>	Change the background color
<code>bgpic( picture_file )</code>	<code>bgpic( "background.gif" )</code>	Set a background picture. Must be GIF format
<code>bgpic( "nopic" )</code>	<code>bgpic( "nopic" )</code>	Removes the background picture

Note: colors can be any of the following:

- A named color, see the list of colour names at <https://trinket.io/docs/colors>
- A color code in the in form of "#rrggbb", use the google picker at <https://www.google.com/search?q=color+picker>
- A tuple of ( red, green, blue ) values from 0 to 255 each

## Screen settings

Command	Example	Description
<code>screensize( width, height )</code>	<code>screensize( 640, 480 )</code>	Set width and height of turtle screen
<code>title( name )</code>	<code>title( "My amazing project" )</code>	Set title name of turtle screen
<code>reset()</code>	<code>reset()</code>	Clear screen, re-center turtle, reset heading to right
<code>clear()</code>	<code>clear()</code>	Clear screen without recentering turtle or resetting heading
<code>window_width()</code>	<code>w = window_width()</code>	Get screen width
<code>window_height()</code>	<code>h = window_height()</code>	Get screen height
<code>isvisible()</code>	<code>vis = isvisible()</code>	Is the turtle visible?
<code>speed( new-speed )</code>	<code>speed(10)</code>	Set drawing speed between 1 and 10. Normally starts at 6.
<code>bye()</code>	<code>bye()</code>	Close turtle
<code>exitonclick()</code>	<code>exitonclick()</code>	Tells Turtle to quit if the exit icon of the screen is clicked

## Events

Command	Example	Description
<code>onscreenclick( function )</code>	<code>onscreenclick( click )</code>	execute function when screen clicked. callback must take two parameters for x,y coordinates of the click
<code>onrelease( function )</code>	<code>onrelease( click )</code>	execute function when mouse click let go. callback must take two parameters for x,y coordinates of the click

Command	Example	Description
<code>onkeypress( function, key )</code>	<code>onkeypress( pressed, "Up" )</code>	execute function when nominated key is pressed. callback must take two parameters for x,y coordinates of the click
<code>ontimer( function, time-in-ms )</code>	<code>ontimer( ticktock, 1000 )</code>	execute function once after given number milli-seconds
<code>mainloop()</code>	<code>mainloop()</code>	Start the main event handling loop to run your game

## Write text to screen

Command	Example	Description
<code>write( text )</code>	<code>write( "Hello there")</code>	Write text to screen where ever the turtle is
<code>write( text, font=(fontname, size, weighting)</code>	<code>write( "Hello there", font=("Arial", 10, "normal"))</code>	Write text to screen of specified font

## Input popup prompts

Command	Example	Description
<code>textinput("title", "prompt")</code>	<code>name = textinput("Name", "What is your name?")</code>	Popup box for text information
<code>numinput("title", "prompt")</code>	<code>num = numinput("Enter a number", "Enter a number between 0 and 100")</code>	Popup box to enter a number
